

I am in full agreement with the authors of RM-10787. Morse Code should not be the measure by which we (amateur radio operators) gauge each other, and how band restrictions are assigned. Morse Code should be removed from the licensing structure as allowed by ITU regulation.

I also do not agree with comments made by (primarily) older operators who predict the demise of the hf bands if code is removed as a barrier. My challenge to them is simple: prove it. Do not assume that the hf bands will become this vast cb-like spectrum.
